**\*provided as a separate release**

# Methodology

On April 1, 2020, USC's Center for Economic and Social Research (CESR) invited all active members of CESR's Understanding America Study (UAS) probability-based internet panel to participate in an ongoing coronavirus tracking survey. The panel includes participants with and without household members in K-12 or higher education. This document describes the methodology used to identify households with members who were eligible to receive questions from the education modules included in the UAS.

This methodology and topline is associated with participants in Wave 8 of the UAS tracking survey, administered from June 24 to July 21, 2020. A total of 7,423 panel members were eligible to be included in the full weighted sample, resulting in a participation rate of 82% for this wave. The sample includes 81 who started but did not complete the survey. See the methodology and topline for the full tracking survey [here](#).

## Education Sample Information

A total of 2298 adult US residents with household members (usually their children) in preK-12 or higher education participated in this wave and are included in the final UAS250 data file. After unduplicating households with multiple respondents (see below), UAS250 includes responses from 1911 households. This sample is similarly-sized to those from previous administrations of the education portion of the UAS (see Table 1).

The margin of sampling error for the full sample of unduplicated households with children is +/- 2 percentage points, and +/-3 points for the full sample of unduplicated households with a member enrolled in postsecondary education. For questions with smaller sample sizes than the full sample, margins of sampling error are wider. All margins of sampling error are specified by question in the topline and crosstab results.

The full education sample is split into three subsamples for the analyses, and the subsamples are not mutually exclusive. Households could have been eligible for inclusion for more than one analytic subsample:

- Respondents with K12 school-aged children in any wave (SA sample)
- Respondents with either pre-school or K12 school-aged children in any wave (PSA sample)
- Respondents enrolled in postsecondary education or with a household member enrolled in postsecondary education as of UAS240, administered April 15-May 12 2020 (PS sample)

Wave	UAS235	UAS240	UAS242	UAS250
Dates in field (all 2020)	Apr 1-Apr 29	Apr 15-May 12	Apr 29-May 26	Jun 24-Jul21

Unduplicated SA sample size	1296	1505	1533	1410
Unduplicated PSA sample size	1427	1658	1686	1550
Unduplicated PS sample size*	n/a	784 (907 individuals)	777 (901 individuals)	719 (795 individuals)

\*See the section *Special Considerations for Interpreting Findings from the Higher Education Sample*, below, for distinction between individuals and respondents in the PS sample.

## Method and Rationale for Unduplicating Households

Some households in the UAS education sample have multiple respondents who respond about the same individuals in K-12 or postsecondary education. For instance, in a household with two parents and one child, and both parents were included in the UAS panel and participated in a given wave, both respondents were asked the same education questions about their child's experiences. In Wave 8, 314 households (17%) in the PSA sample and 155 households (18%) in the PS sample had multiple respondents within a household. While the UAS is designed to capture information about American households, for the education modules, we are primarily interested in the characteristics and experiences of individual students, and duplication within households will over-represent the responses of households with multiple respondents. To eliminate this over-representation, we unduplicate households with the goal of maintaining respondent sample continuity across waves. The method is described in more detail below:

1. Most households already have a flag in the main UAS dataset identifying the "primary respondent," for example 1491 of Wave 8 households in the PSA sample and 690 in the PS sample. When the primary respondent flag exists, we defer to that designation by selecting that individual. For more information about the primary respondent flag, see <https://uasdata.usc.edu/index.php> ("default survey variables").
2. For households in which the flag doesn't already exist, we randomly designated one respondent per household as that household's "primary respondent" in the first UAS administration of education questions (UAS235) and retained those responses for the unduplicated sample.
3. If the "primary respondent" gives a response in any subsequent wave, we retain that response for that wave's unduplicated sample.
4. If that primary respondent is not available in a given wave, we randomly select another respondent from that household to retain for the unduplicated sample.

The unduplicating process yielded unduplicated household counts of 1550 in the PSA sample, and 719 in the PS sample (Table 1). Similar proportions of responses (available on request) were dropped in other waves.

## Randomly-selected child

Responses to questions asked of parents of preK-12th grade children who have more than one child might differ by child. For questions for which parents may have differing responses by child, starting with uas240 we programmed the survey instrument to randomly select a

single child and asked the respondent to respond for that child only. We retained this same randomly selected child over time for these questions, which permitted comparing responses about the same child longitudinally.

## Special Considerations for Interpreting Findings from the Higher Education Sample

While some questions about specific preK-12 students ask respondents to consider **one** (randomly-selected) preK-12 student in their household, the UAS asks the set of higher education questions about **each** household member enrolled in higher education, including the respondents themselves. Therefore, a single survey response may include information about multiple individuals enrolled in higher education as of April 2020.

Since each respondent can report on multiple individuals within a household, the PS sample sizes represent the number of individuals for which a selected panel member was responding, not the unique number of respondents. Across all waves, approximately 30% of individuals in the PS sample are responding about themselves (i.e. they are enrolled in an institution higher education) and 70% of individuals are reported upon by another household member, usually a parent.

The unduplication still occurs at the household level for the PS sample, since each respondent within a household reports upon each postsecondary student in that household. Since the UAS is weighted at the household level, for all postsecondary analyses we divide the UAS household weight by the number of individuals reported upon in that household. This prevents households with more postsecondary students from being over-weighted.

While allowing respondents to provide information on more than one individual in higher education allows us to report on a larger PS sample, it comes with an important limitation: demographic information (e.g., that used for cross-tabs) is only collected for the respondent, not for each individual enrolled in higher education. This affects interpretation of our results. For example, results by race (Black versus White) should be interpreted as “x% of higher education students in a household with a Black respondent versus y% of higher education students in a household with a White respondent.” They should *not* be interpreted as “x% of Black higher education students vs y% of White higher education students.”

## Special Considerations for Interpreting Findings on 11<sup>th</sup> and 12<sup>th</sup> graders

The UAS also includes questions about students’ postsecondary plans. These questions are offered to respondents whose households include high school 11th and/or 12th graders. These questions are structured similarly to the higher education questions, in which each respondent is asked the set of questions about each 11th and 12th grade student in their household. Findings about plans after graduating high school should be interpreted at the household level, not at the student level. For example, as “x% of households with high school juniors and seniors have at least one junior or senior who plans to attend a 4-year college,” *not* as “x% of high school juniors and seniors plan to attend a 4-year college.”

## Tracking Survey Design

Each panel member is randomized to respond on a pre-assigned day of the week, distributed so that our full sample is invited to participate over a 14-day period. Respondents have until their next assigned wave day (or 14 days) to complete the survey but receive an extra \$1 incentive for completing the survey on their assigned day. Most respondents (90%) participated on their assigned day of the wave, between June 24 and July 7, 2020, and earned the bonus incentive. The rest of the sample (10%) completed the survey after their assigned day but within their allotted 14-day window. Data for the full sample is thus not final until the end of a 28-day period. Microdata files are released after each full wave.

Survey questionnaires, toplines, microdata files, and a press room specific to the UAS education samples are available on our UAS Covid19 data site at [uasdata.usc.edu/page/Covid-19+Home](https://uasdata.usc.edu/page/Covid-19+Home).

## Questionnaire

Survey wording and question text are provided in this topline release, but for full wording including context, please refer to the associated codebook and questionnaire. For most questions, we rotated the order of response options, and/or questions to average out order effects. Respondents participated via computer, mobile device or tablet, at any time of day or night during the field period. When households selected as UAS panel members through Address-Based-Sampling did not have a tablet and/or internet access we provided them. The survey was conducted in the respondents' choice of English or Spanish.

A few survey questions experienced slight changes across UAS administration waves, summarized in Table 2.

Question	Changes starting in	Description of Change
cl006b, cl010aa, cl010bb, cl011b, cl013	UAS242	New answer option added: “[NAME]’s institution does not plan for in-person enrollment in the fall.”
sl012, sl014	UAS250	New answer option added: “A national service program (e.g., Americorps, City Year)”
sl045, sl046	UAS250	In UAS250, a coding error affected data for these questions (description and recommendations for how to proceed are below)
ed015 / sl038	UAS250	This question asks about support for cancelling all standardized tests for the 2020-2021 school year. When asked prior to UAS250 (as part of sl038), respondents answered on a 5-point scale, with a neutral midpoint option. When asked in UAS250

		and beyond (as part of ed015), respondents answered on a 4-point scale, with no neutral midpoint option.
cl005ddd	UAS250	Prior to UAS250, respondents were instructed to pick one way their employment status had changed. Starting in UAS250, they were instructed to check all options that apply. (The set of options does not change across waves.)

Additionally, in UAS250, participants were given the option to opt into or out of the education questions, which they did not have in previous waves. 1428 of 1550 households (92%) in the PSA sample opted in and 659 of 719 households (92%) in the HE sample opted in.

## Two further notes specific to time-use questions (sl045 and sl046)

UAS 250 asks respondents to report on activities that SA children engaged in on a typical day in the last week. However, 10% of the SA sample (n=153) were still in school at the time they responded to the survey. We removed students still in school from the analyses of these questions and recommend other researchers do the same if examining how children spent time during “the summer.” (SI039 indicates whether school is in session during UAS250 administration).

There was also a programming error for these questions early in the administration of UAS250, such that any response greater than 7 hours in the last week was coded as 1-2 hours in the last week. Therefore, the “1-2 hours in the last week” category contains some responses of 1-2 hours in the last week and some responses of 7-8, 8-9, and 10 or more hours in the last week. While the error was fixed during the administration window, we recommend using only the categories unaffected by the error, for example by using a binary indicator for “0 hours in the last week” versus “more than 0 hours in the last week.”

## Weights

The method for creating sample weights for the tracking survey follows the general procedure for UAS surveys described in CESR’s online methodology documentation. Sample weights are constructed in two steps. First, we calculate a base weight that corrects for unequal probabilities of selection of different households into the UAS. Second, we generate poststratification weights, which align sample distributions of key demographics, namely gender, race/ethnicity, age, education, and geographic location, with their population counterparts. Population benchmarks are derived from the Basic Monthly Current Population Survey (CPS). The sample weights bring the sample in line with the U.S. adult population. Note that we did not recalculate weights to align to the characteristics of U.S. households with students in K-12 or higher education in particular.

## About the UAS Internet Panel

The Understanding America Study (UAS) is an ongoing national research panel that started in 2014. We recruit panel members in waves from Marketing Systems Group frames of all household addresses in the United States. To ensure full coverage of the U.S. population, we

provide internet-connected tablets to households that were not already online. Our panel includes U.S. residents who have cell phones, landlines, or no phone at all. It also includes a small number of respondents recruited from a listed sample, these participants are not included in weighted samples. Panel members are compensated for their participation.

For more information about the UAS panel, including weighting details; panel sampling procedures; recruitment protocols, survey and recruitment response rates; panel attrition rates; panel management protocols; and microdata files (including nonresponse and paradata), please visit the Understanding America Study panel website at <https://UASdata.usc.edu>.

## About CESR

The Center for Economic and Social Research (CESR), part of the USC Dornsife College of Letters, Arts and Sciences, conducts basic and applied research in economics, psychology, demography, education, and sociology. The center's name signifies the breadth of the research, which encompasses numerous disciplines, topics and methodologies. The Center's multi-disciplinary philosophy fosters a productive and innovative research environment focused on understanding and informing important societal issues.

## Survey Team

**Arie Kapteyn Ph.D.**, is Professor of Economics and the Executive Director of the Dornsife College of Letters Arts and Sciences Center for Economic and Social Research (CESR) at the University of Southern California.

**Marshall Garland MA**, is a Senior Research Scientist at Gibson Consulting Group.

**Shira Haderlein MA**, is a PhD candidate at the University of Southern California Rossier School of Education.

**Morgan Polikoff, Ph.D.**, is an Associate Professor at the University of Southern California Rossier School of Education.

**Amie Rapaport, Ph.D.**, is the Director of Research at Gibson Consulting Group.

**Anna Saavedra, Ed.D.**, is a Research Scientist at the Dornsife College of Letters Arts and Sciences Center for Economic and Social Research (CESR) at the University of Southern California.

**Daniel Silver** is a PhD candidate at the University of Southern California Rossier School of Education.

**Jill E Darling, MSHS**, is Survey Director for the Understanding America Study at the Center for Economic and Social Research at the University of Southern California.

For questions about this survey, please contact [uas-l@usc.edu](mailto:uas-l@usc.edu)

The USC Dornsife Center for Economic and Social Research is a proud member of the American Association for Public Opinion Research's Transparency Initiative. The survey was funded by the USC Dornsife College of Arts, Letters and Sciences.

# Topline Report

Survey dates: June 24 to July 21, 2020

Sample sizes (before unduplication): 1695 (SA), 1864 (PSA), 874 (HE)

## National Sample Characteristics

Respondent Characteristic	SA Sample		PSA Sample		PS Sample**

HH income (\$50,000-\$74,999)	16.6	16.6	16.3	16.4	17.0	18.7
HH income (\$75,000 or more)	45.3	40.8	46.9	42.6	45.5	41.4
Non-Hispanic White	57.8	55.7	57.5	55.6	48.9	47.9
Non-Hispanic Black	8.3	13.0	8.3	13.0	8.4	13.5
Non-Hispanic Asian	5.0	5.4	5.3	5.5	8.1	10.5
Non-Hispanic Other	6.7	4.3	6.5	4.1	5.8	4.1
Hispanic/Latino	22.3	21.6	22.4	21.8	28.8	24.0
Has child in preschool	17.4	19.1	24.9	27.2	n/a	n/a

Has child in elementary (PK-5)	57.8	62.6	52.6	56.3	n/a	n/a
Has child in middle school (6-8)	35.4	34.9	32.1	31.4	n/a	n/a
Has child in high school (9-12)	46.5	42.2	42.2	38.0	n/a	n/a
Received services through an IEP*	9.4	9.4	9.4	9.4	n/a	n/a
Received services through 504 plan*	4.4	3.9	4.4	3.9	n/a	n/a
Received free/reduced price lunch*	37.4	39.8	37.4	39.8	n/a	n/a
Received English Learner supports*	3.2	3.1	3.2	3.1	n/a	n/a
Public (district/magnet/charter)*	88.3	88.6	88.3	88.6	n/a	n/a
Private (religious/independent)*	7.0	5.2	7.0	5.2	n/a	n/a
Other (includes home school)*	4.7	6.2	4.7	6.2	n/a	n/a

\*These variables pertain to one of the respondent's PK-12 children (selected at random), not to the respondent. In the uas240, we asked respondents whether their child received services, and these percentages based on information the respondent provided. We note that they do not represent percentages of children who were eligible, e.g. for meal services due to federal poverty guidelines. Also note that we did not ask these questions about preschool children.

\*\*Because we allow respondents to provide data on more than one postsecondary student, these characteristics are for the respondent, not necessarily for the student. See "Special Considerations for Interpreting Findings from the Higher Education Sample" section, above, for more details.

## Crosstab Release UAS 250 Wave 8: Understanding Coronavirus In America

This release provides demographic and California state results for selected variables from Wave 8 of the Understanding Coronavirus In America tracking survey. Full topline results, question text, data files, and other documents are available from our Covid National Survey Data site.
